SALLY L REAVES

Type: ROUTINE INSPECTION
Date: 05-MAR-2018

3.82(a)

FEEDING.

*** The ring tail lemur is obese and the current diet consists of dog food, fruits, vegetables and cereal (fruit loops). The diet documented and approved by the attending veterinarian consists of fruit, dark leafy vegetables and dry zupreem primate biscuits and zupreem canned primate diet. For the health of the animal and to assure the diet received is of sufficient nutritive value, primate diet should be offered per the veterinarian's diet plan.

Correct by: March 6, 2018

3.84(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** The main building housing the non human primates and other exotics needs to be addressed. There are small animal enclosures stacked on top of freezers, animals on top of the dry food bins, miscellaneous items stored above animal enclosures (crates, plastic items, bags etc). Additionally there is a lot of cobwebs and dust up in the sky lights that needs to be cleaned. This is a re occurring issue for housing during the winter months and the facility needs to come up with a long term solution during the winter months to facilitate good housekeeping practices for the health of the animals.

Correct by: May 6, 2018

3.125(a)

FACILITIES, GENERAL.

The wire floor in glider enclosure is showing signs of rust and should be replaced, in addition, the moss enrichment ball has several areas of moss that is gone exposing wire with sharp points. This moss ball could be a potential hazard to the animals and should be replaced.

The board on the side wall of the cavy enclosure has a larger hole in it and is in disrepair. This wall is between the cavy's and foxes and should be replaced to keep the enclosure in good repair and to reduce viability between the prey and predator species. .

Inspection Report

There are zip ties securing the wallaby blanket to the side of the enclosure, but the zip ties have not been cut back and are protruding into the enclosure at eye level where the animal jumps into the blanket. These zip ties should be cut down for the safety of the animal.

The agouti is in the top section of a two tiered enclosure that is not stable. When the animal moves around the enclosure, the whole unit moves which can cause some distress to the animal. This unit needs to be balanced so that it is stable and can withstand movement from the animals in the enclosures.

Correct by: May 10, 2018

This inspection and exit interview were conducted with a facility representative.
