SPANAWAY, WA 98387

Customer ID: **327307**

Certificate: **91-C-0141**

Site: 002

CITY GOAT FARM & ZOO INC

Type: FOCUSED INSPECTION

Date: 01-MAR-2024

2.1(b)(2)(ii)

Requirements and application

The facility has two wolves, and the current license does not authorize the use of exotic or wild canids such as wolves. The species is considered a dangerous animal, and their care and use must be evaluated during the licensing process. The licensee must obtain a new license before using any animal beyond those types authorized on the existing license. To correct this issue, the licensee plans to transfer the wolves to another facility by March 15, 2024.

2.131(c)(1)

Handling of animals.

The facility conducts guided tours for the public; however, the primary enclosure for the two wolves does not have a barrier present that would prevent the public from approaching the fence. A facility must have sufficient distance and/or barriers between the animals and the public, so as to assure the safety of both the animals and the public. To correct this issue, the licensee plans to transfer the wolves to another facility by March 15, 2024.

2.134(a)

Contingency planning.

The contingency plan is incomplete. While the plan does list some reasonably anticipated emergencies or situations that trigger implementation of the plan, it does not list the specific tasks/responsible person for the tasks, the specific resources needed to perform the task, or how the response and recovery will be handled. Exhibitors must develop, document, and follow an appropriate plan for the humane handling, treatment, transportation, housing, and care of their animals in the event of an emergency or disaster. The facility shall ensure an adequate contingency plan is developed and followed in case of an emergency. Correct by: March 11, 2024

3.125(a)

Facilities, general.

Two of the clear rubber flap coverings over the pet doors for the otters are torn/chewed. The indoor and outdoor housing facilities shall be maintained in good repair to protect the animals from injury. These coverings should be replaced or removed. Corrected during the inspection.

Inspection Report

3.125(c)

Facilities, general.

The refrigerator in the kitchen prep area has spillage present at the bottom. Supplies of food must be stored in a clean area to protect against deterioration, molding, or contamination. The refrigerator must be cleaned. Corrected during the inspection.

3.131(a)

Sanitation.

Wet bedding and excreta were present in the some of the animal enclosures. These included the sheltered area for the cavies, and also an indoor shelter for the otters. Wet bedding and excreta shall be removed from primary enclosures as often as necessary to prevent contamination of the animals and to minimize disease hazards and reduce odors. These areas must be cleaned. Corrected during the inspection.

This inspection and exit interview were conducted with the licensee.
