46914 Hwy 101
Bandon, OR 97411

Customer ID: **3437**
Certificate: **92-C-0181**
Site: 001
West Coast Game Park Inc

Type: FOCUSED INSPECTION
Date: 01-APR-2025

2.40(b)(3) **Direct** **Repeat**

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

On 01APR2025 an older lioness (Isabella), and older lion (Jabri), and a black African leopard (Onyx) were observed with decreased muscle mass with hips, ribs, and spine prominently displayed under the skin. These animals have not been evaluated or treated by the attending veterinarian to diagnose any dietary insufficiency, diseases, or injuries accounting for the loss of body condition. At the time of this inspection the Attending Veterinarian (AV) advised he had not been consulted or requested by the facility to examine or treat these animals since the last routine inspection on 03DEC2024. Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

3.127(d) **Repeat**

Facilities, outdoor.

A portion of the perimeter fence failed to meet the minimum height requirement for a facility with potentially dangerous animals, without written approval by the Administrator. Approximately 50 feet of 8-foot-tall hedge row was cleared from the north side of the facility revealing a 5-foot-tall chain-link fence representing this portion of the perimeter fence. An incomplete perimeter fence could allow unauthorized people and animals to access the zoo animals and cause harm. Also, if an animal escaped its primary enclosure, it could leave the zoo and be injured or pose danger to the general public. The facility must be enclosed by a perimeter fence that is sufficient to keep animals and unauthorized persons out so that it protects the animals as well as function as a secondary containment system for the animals in the facility.

3.129(a) **Direct** **Repeat**

Feeding.

During inspection two metal trash cans used to store the pelleted and whole grain diet fed to facility hoof-stock were found with one of the cans without a lid but both containers had contents contaminated with multiple dried rodent droppings. Feeding animals food contaminated with rodent feces affects animal wellbeing by transmitting pathogen that may result in disease or death. Food shall be wholesome palatable and free from contamination in order to protect the welfare of the animals from pathogens carried by feces from vermin. Correct by feeding animals food that is free of contaminants as well as providing adequate measures to prevent contamination of the food.

3.131(d) **Repeat**

Inspection Report

Sanitation.

At the time of inspection, the facility remains with an inadequate program of pest control with regards to rodents. At inspection, live rats and their fecal material were seen on structures within the hoof-stock feed storage shed including on furniture, the floor, rafters and framing of walls and ceiling. A significant number of rodent fecal droppings surrounded the commercially formulated nonhuman primate (NPH) food storage bins including but not limited to the middle of the floor, in corners, and on empty bags in the NPH storage shed. Rodents and other pests harm animal welfare by harboring diseases and parasites that can be transmitted to vulnerable zoo animals. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests must be established and maintained.

This inspection and exit interview were conducted with the facility representative.
