Type: ROUTINE INSPECTION
Date: 24-NOV-2014

3.1(c)(1)(2)

HOUSING FACILITIES, GENERAL.

Outdoor dog enclosure (Dirt, Clay, and Piggy): There was an approximately 3ft. X 5ft. raised platform with some loose, exposed, and protruding bolts. These loose bolts have created open gaps and instability between the wooden board, top surface and the metal base it is attached. Surfaces of housing facilities including houses, dens, and other furniture-type fixtures and objects within the enclosure must be free of jagged edges, sharp points or open gaps that may cause injury to the animals. A system of maintenance and repair of enclosures must be in place to protect and prevent injury to the animals.

Correct by 12/23/2014

3.75(c)(2)

HOUSING FACILITIES, GENERAL.

Ring-Tailed Lemur Enclosure: A wooden platform shelf in the southwest corner of the enclosure was generally worn, rough, splintered and contained a jagged edged corner. All surfaces must be free of jagged edges and be readily cleaned and sanitized. A system of maintenance and replacement of worn or soiled surfaces that cannot be readily cleaned and sanitized must be in place.

Correct by 12/23/2014

3.127(d)

FACILITIES, OUTDOOR.

The effectiveness of the perimeter fence has been reduced by the placement of an approximately 6 ft high storage, supply cabinet inside and directly next to an area along the west side of the perimeter fence behind the lion cage. The area near the perimeter fence must remain clear of items such as storage bins, crates, trailers, etc. that could facilitate the entry of unauthorized humans or animals, or could allow animals to escape the perimeter fence from the inside. A system must be in place to ensure the perimeter fence is maintained in an effective manner.
