Certificate: 16-C-0013

Site: 001

SILVERMANS FARM INC

Type: ROUTINE INSPECTION

Date: 12-APR-2016

3.50(a)

FACILITIES, GENERAL.

During this inspection it was noted that the rabbit enclosure was in need of attention. The facility has recently removed a portion of the substrate and added a layer of small wire mesh. The mesh was then recovered with more substrate. However, the areas around the large rocks have protruding pieces of the wire mesh.

To ensure that the animals are not injured on this mesh it will need to be trimmed away.

***To Be Corrected By: April 16, 2016

3.125(a)

FACILITIES, GENERAL.

1. During this inspection it was noted the gate between the donkey and fallow deer pen was in need of attention. The small wire mesh on the metal gate has begun to detach in several areas. There are broken welds present. To ensure that the animals are not injured on this gate, it will need to be addressed.

*** To Be Corrected By: April 16, 2016

2. There are also green sheets of material that need to be removed from the bison / zebu / Texas long horn and Jacob sheep / llama enclosures. These curtains were used during the winter months as wind breaks. However, they have since detached from the shelters and are on the ground by the entrance to the shelters. To ensure that the animals are not injured on this material, it will need to be removed.

***To Be Corrected By: April 16, 2016

An exit briefing was conducted with the licensee.
