Type: ROUTINE INSPECTION
Date: 25-MAR-2015

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***Darla the ringtail lemur had two cuts about 2 - 3 inches long in the left inner thigh. It was two opened wounds that were red and moist appearance. The owners don't know how she attained the injury. The owners notated the injury in a log but the attending veterinarian was not consulted about the medical issue. The owner is not communicating with the veterinarian about the health concerns of his animals. As a result the injuries are going unattended. The owner must consult their attending veterinarian on health concerns of the animals in a timely manner in order to provide the proper treatments to ensure good health and well-being of the animals. Correct from this day forward.

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***Pamela the black handed spider monkey's toe on her right foot was cut off. The wound appeared moist and reddened in color. The owner was unaware of the issue and the attending veterinarian was not consulted. There is no concept of when and how the injury occurred. Daily observation of the animals must occur to assess the health and well-being of the animals. It is important to take the time to observe the animals for such things as behavior, interaction with other animals, eating habits, gait and possible medical conditions. Communication with the attending veterinarian is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian. Correct from this day forward.

3.75(c)(3) REPEAT

HOUSING FACILITIES, GENERAL.

***In Chucky the rhesus macaque's enclosure there were fire hoses that had a green film or residue that needs to be cleaned or replaced. Also his night house had an abundance of dirt and other unknow particles accumulating that needs to be cleaned. Hard surfaces in which nonhuman primates come in contact must be spot cleaned daily and sanitized to prevent accumulation of excreta or disease hazards.

***In Pamela the spider monkey's night house there was old feces in the rear of it and had not been spot-cleaned daily. Hard surfaces in which nonhuman primates come in contact must be spot cleaned daily and sanitized to prevent accumulation of excreta or disease hazards.

Inspection Report

3.125(a) REPEAT

FACILITIES, GENERAL.

***In the primary enclosure containing two tigers, Agitha and Athena, there is a wood post that should be supporting the right side of the roof of the cage. This post has partially fallen and is no longer attached to the adjacent posts. This wooden post needs to be repaired to keep the roof of the cage from falling and injuring the animals. The primary enclosure shall be structurally sound and shall be maintained in good repair to protect the animals from injury.

***The primary enclosure for Tabitha the tiger is in disrepair. There is a gap between the top fencing and the bottom gate wide enough for the tiger to get its head through it. This gap needs to be closed so that the tiger can't get out of the enclosure. The enclosure shall be structurally sound and shall be maintained in good repair to contain the animals.

***The coatimundi's cage has an old rusted wire fence on the inner side of the newer fencing. Parts of this older fencing has broken pointy ends. The coatimundi's climb all over the cage and the pointy ends could potentially injure the animals. The fencing of the primary enclosure shall be structurally sound and shall be maintained in good repair to protect the animals from injury.

***In the grizzly bears primary enclosure there is a large hole that is directly beneath a thin concrete slab. Since the concrete is so thin and the hole beneath it is so large, with the constant traffic of the bears walking on it, it could potentially collapse causing injury to the bears. The flooring in the enclosure shall be structurally sound and maintained in good repair to protect the animals from injury.

The inspection and exit briefing was conducted with the owner.
