Type: ROUTINE INSPECTION  
Date: 20-JUL-2021

---

### 2.40(b)(3)

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

An adult black & tan guinea pig on the front side of the building, in row 4, 2nd enclosure on rack from the top, was observed with a mass under her chin. This animal had a firm, but moveable mass on her neck approximately 1 inch in diameter.

An adult tan & white guinea pig on the back side of the building, in row 5, 4th enclosure on rack from the top, was observed with a right head tilt.

An adult tri-colored (white, black & tan guinea pig on the back side of the building, in row 6, top enclosure on rack, was observed to have a right head tilt and a mass under her chin. This animal had a firm, but moveable mass on her neck approximately 3/4 of an inch in diameter.

All three animals appeared to be eating and drinking normally. The treatment for masses and head tilts are not addressed in the program of veterinary care and there is not record that the licensee had identified these three animals prior to today's inspection. A failure to conduct daily observations with direct communication with the attending veterinarian can result in a delay of care provided to animals and can prolong animal health problems. All animals must be observed daily

## Inspection Report

---

to assess their health and well-being with a mechanism of direct and frequent communication with the attending veterinarian so that timely and accurate information on problems of animal health and well-being are conveyed.

The licensee must contact the attending veterinarian and have these three guinea pigs evaluated for masses and head tilts so that appropriate treatment can be provided. Correct by July 22, 2021.

### 3.31(b)

### Repeat

#### Sanitation.

Housekeeping. There was spilled barley seed, ear corn, empty bags, tarps guinea pig feces, hay, grass cuttings, dust and dirt on the floor of the animal room. There were old racks, battery cart, window ledges and tools covered with dust, dirt, cobwebs and dead insects.

Animal facilities must be kept clean to ensure good quality of air for the animals and to prevent unnecessary disease risks. Ineffective cleaning and housekeeping can expose the animals to disease hazards, pest and health problems. Correct by ensuring the premises are kept clean, including: removing and cleaning dust, dirt, spilled seed, hay, grass clippings, cobwebs, clutter, old pens from the floor of the animal room, carts, window sills, walls and ceiling; and maintaining a level of general cleanliness to support good animal husbandry and health. Remains uncorrected.

This inspection and exit interview were conducted with the licensee.
