AMOS AND KATIE STOLTZFUS

Type: RE-LICENSE INSPECTION

Date: 16-AUG-2021

2.75(b)(1)

Records: Dealers and exhibitors.

The last inventory of the number of animals on hand was documented on 6/19/21 and only included adult guinea pigs.

The facility is not maintaining a current inventory of all animals on hand including adults, weanlings, and newborns.

Failure to maintain these records can make it difficult to assess the health of the colony by identifying animal losses by deaths or decreased numbers of animals born and to track animals being used in regulated activities to ensure their humane care and use.

The facility must maintain records containing the required information for animals which fully and correctly disclose the number of animals held, owned, and acquired or disposed of including births and deaths.

3.28(c)(1)(iii)

Primary enclosures.

There was one guinea pig pen that did not provide the required amount of floor space. There were 41 weanling guinea pigs less than 350 grams in size housed in a pen that measured approximately 51 inches by 35 inches or 1,785 square inches of floor space. Each weanling requires a minimum of 60 square inches of floor space. Total floor space required to house these weanlings is 2,460 square inches. There cannot be more than 29 weanling guinea pigs housed in an enclosure measuring 1,785 square inches.

Inspection Report

Inadequate space can cause stress, crowding, and aggression in animals.

The licensee must ensure that all guinea pigs are provided with the minimum amount of floor space in order to avoid overcrowding and to support the health and well-being of the guinea pigs.

3.29(d)

Feeding.

Approximately 25% of the guinea pig enclosures had self-feeders with a large amount of ground up powder and caked feed in the trough of the feeder and little to no pelleted feed available.

Failure to provide access to pelleted feed can lead to decreased feed consumption which may negatively affect the health of the animals.

The facility must ensure measures are taken to prevent deterioration or caking of the feed in the self feeders.

This is a 1st Re-License Inspection for a Class "A" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by 10/2/21 when the license expires or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
