Certificate: **74-C-1020**
Site: 001
Mary Covington

Type: ROUTINE INSPECTION
Date: 21-OCT-2015

3.50(d)

FACILITIES, GENERAL.

There is an excessive amount of feces that has built up underneath the rabbit enclosure and the feces is starting to form a mound. Most of the feces have become greyish in color. Animal waste can contribute to unsanitary conditions, varmint infestation, odors, and disease hazards. The licensee must ensure that animal waste is removed often enough to minimize any potential contamination, odors or disease hazards.

Correct by Oct 26, 2015

3.54(b)

FEEDING.

The rabbit enclosure food receptacle has old caked rabbit food at the bottom and feces inside of the food receptacle. Contaminated food receptacles directly expose the animals to harmful bacteria that affect the health and wellbeing of the animals. Measures must be taken to prevent the molding, deterioration or caking of the feed to prevent the contamination of the fresh feed. Food receptacles shall be located so as to minimize contamination by excreta. Licensee must ensure that all food receptacles are cleaned and sanitized to minimize disease hazards.

Corrected at the time of inspection.

3.56(a)(1)

SANITATION.

Inside the rabbit enclosure there is an excessive amount of dirt, urine, feces, hair, and other organic material build up in the corners and along the door edges. Poor sanitation conditions can be detrimental to the health of the animals and can be a harbor for diseases. Licensee must ensure that there are adequate measures in place to remove all dust, dirt, urine, feces and all other organic material from all surfaces of the facility by providing periodic cleaning of the enclosures and hard surfaces.
