2.40(b) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There is a cavalier type dog black and white microchip number 4A3B7A7568 dob 2-26-2007. this dog had a discharge of matter around his left eye. The dogs ears appeared dirty, and his teeth are discolored with a build up, right side gums appear red and some teeth missing.

This condition can be painfull and can cause other health issues.

This dog needs to be evaluated by a licensed veterinarian to determine the best course of action and treatment for this dog.

To be corrected by 12-15-2014

There is a female bernese mountain dog microchip number 4541683131 dob 11-13-2003 black with brown and white trim..

This dog appears to be in thin condition and was observed pushing her head area on the fence and rubbing her head ear area on the fence while moving down the fence. Upon closer observation the ears appear dirty inside and she has a sore on right ear approximate size between 1 and 2 inch diameter of scabs. This dog was also observed shaking her head, scratching with her back legs at front legs and just scratching motions while sitting.

This dog also has an excessive accumulation of brown and grey color substance along the cheek teeth.

This teeth condition can be painful and can cause other health issues.

There is another Bernese type female dog dob 11-13-2013 microchip number 453F105746. black with brown and white trim.

This dog was observed in thin condition, shaking her head and scratching with her back legs this dog also had hair loss on top of hips with an open appearing sore approximately 1 inch by 2 inches in this area of hair loss.

This dog also has a brownish to grey accumulation along the cheek teeth.

This condition can be painful and cause other health issues.

This condition needs to be evaluated by a licensed veterinarian to determine the best course of action and treatment for this dog.

All of these dogs need to be evaluated by a licensed veterinarian to determine the best course of action and treatment of each of these animals and daily observations need to be done to catch problems before they are this

Inspection Report

much of a problem.

To be corrected by 12-15-2014

3.6(a)(1)

PRIMARY ENCLOSURES.

The kennel has plastic pipes around the outside of each enclosure inside the fence to contain the gravel used. Some of these pipes have become disconnected and are open to the weather, with some also sticking up in the air, these pipes and the debris they hold inside can harbor vermin fleas etc. These pipes need to be maintained and constructed in a way that they remain structurally sound or are completely covered and are not open to the weather giving vermin a protected place to live.

This needs to be corrected and maintained by Jan 1 2015

An exit interview was conducted at time of inspection with facility representative
