ZOOLOGICAL SOCIETY OF SAN DIEGO

Type: ROUTINE INSPECTION

Date: 18-DEC-2015

3.125(a)

FACILITIES, GENERAL.

In some the larger pens/exhibits, the enclosure fence line consists of a concrete wall 4 to 8 feet in height, covered by gunnite, topped with chain link attached to stanchions. There are several small areas (given the amount of enclosure fence present) where the substrate (both gunnite and dirt) below the existing chain link fence has been eroded away (by natural and animal causes). In some areas the gunnite has chipped away from the supporting concrete, creating cracks and large pieces of debris.

*In the truck pass through between the Arabian Oryx pen to the white lipped deer enclosure, as you are looking up from the road/lower enclosure fence of the Arabian Oryx pen, there is an area where the erosion under the fence has been filled with tree trunks, fence posts and rocks, creating a hazardous area.

*In the field exhibits, chicken wire has been attached on the exterior of the fence line as predator wire, and is mostly buried. Erosion and animal activity has exposed chicken wire in some areas, covering the gap between the concrete wall and the chain link. Chicken wire material is not appropriate and of sufficient strength to prevent entry of small noncollection animals into the enclosure. Specific areas included:

North Africa; northwest fence line between North Africa and East Africa exhibit. One small area has been temporarily patched with an additional section of chain link fencing, and the permanent repair needs to be structurally sound. Areas not yet repaired are present. In front of this fence line, a PVC pipe is visible in a crevasse created by erosion.

Asian plains exhibit; north side fence facing the white lipped deer and the Przewalski's horse exhibits

Facilities must be structurally sound, constructed with material that is an appropriate strength for the animals involved and shall be maintained in good repair.

Inspection Report

FACILITIES, OUTDOOR.

In the North African field enclosure, housing Ankoli, scimitar horned oryx and other compatible species, there is a small area under a grove of trees near the entry gate that is persistently wet, resulting in some standing water and an area of green vegetation growth. This area of excess water has resulted in persistent runoff down the adjacent slope and there are multiple deep crevasses and one area where the ground is no longer solid and has collapsed creating a hole. The deep crevasses and hole may pose a hazard to an animal and have the potential for injury.

Correction date 15 March, 2016

3.127(d)

FACILITIES, OUTDOOR.

On the outer service road heading to hillside holding, the effective height of the perimeter fence for the hillside holding pens is decreased by the accumulation of dirt into a berm at multiple areas along the fence line. There are also 2-3 areas where the fence posts have been damaged, or the chain link has been damaged, causing a small hole. The effective height of the perimeter fence must be at least 6 feet high and maintained in good repair.

Correction date: 15 March 2016

3.131(c)

SANITATION.

In the main commissary, the tile that creates the baseboard has broken off in three different places, exposing the wall to water used in cleaning and resulting in an area that can not be effectively cleaned. The junction of the wall and the baseboard is peeling away and separating in two corner areas. The kitchen was inspected in the middle of scrubbing, and water was pooling in several areas that had a dark buildup on the tile and grout of the floor. The broken areas of tile are not maintained in good repair and the inability to effectively clean the main kitchen does not facilitate the prescribed husbandry practices.

Correction date 15 March, 2016

Exit Interview conducted with facility personnel. Accompanied on inspection by Jeanne Lorang, A.C.I.

Additional Inspectors

Lorang Jeanne, Animal Care Inspector
