Twin Falls, ID 83303

Customer ID: 1692
Certificate: 82-R-0008

Site: 001
DEPT. OF AGRIC.

Type: ROUTINE INSPECTION
Date: 13-JUL-2016

3.125(c)

FACILITIES, GENERAL.

The hay for the next school year's animals has already been procured. It is stacked on the bare ground with a tarp over the top. The sides of the stack are exposed to the weather, and the bottom bales in the stack are in contact with moisture from the ground. The outside, sun-exposed parts of the bales are bleached out. Previous IACUC semiannual inspection reports document finding mold in the hay stored in this manner, and that the students had to sort through the hay to exclude moldy portions from that which was fed to the animals.

Exposure to the elements can result in deterioration of hay quality and molding due to moisture. The unhealthy effects of the mold can extend beyond the mold that is visible, and can cause respiratory and digestive health problems in the animals.

Correct by storing the hay off the ground and fully protected from the direct effects of sun and moisture. Correct within 30 days, by 8/12/2016.

The inspection and exit briefing were conducted with a facility representative.
