Type: ROUTINE INSPECTION
Date: 13-MAY-2021

3.56(a)(1)

Sanitation.

There are four metal enclosures containing a total of five, adult rabbits of unknown sex, which have an accumulation of dried fecal material and debris on the metal sides and grated flooring in several places. Fecal accumulation increases the possibility of disease transmission and attracts pests. An effective method of rabbit caging sanitation must be established and maintained to assure the health and well-being of the animals.

To be corrected by May 27, 2021

3.125(a)

Facilities, general.

The fencing for the pig enclosure, accessible to six adult, domestic pigs of unknown sex, is not structurally sound or in good repair. The pipe fencing is covered with 4X4 wire field fence and metal flashing with broken wire twisted around it in some places. The 4X4 wire field fence is sagging in some areas from animals leaning on it over time.

The large, main enclosure, accessible to 16 goats, 11 cattle, two llamas and six pigs of unknown sex, has a rusted piece of metal flashing with a sharp out-turned edge, measuring approximately 1 foot by 2 foot, attached at ground level on one of the fences.

Inspection Report

Sagging wire, sharp metal edges and broken wires can injure animals. The licensee must ensure that facilities are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

To be corrected by May 27, 2021

3.129(b)

Feeding.

In the pig enclosure, accessible to six adult, domestic pigs of unknown sex, there is a food receptacle with an excessive accumulation of dry, old food, dirt and other debris on the interior surface. Dirty feeding receptacles can contaminate fresh food and cause illness. The licensee must establish and maintain an effective method for cleaning and sanitization of food receptacles so that food receptacles are kept clean and sanitary.

To be corrected by May 27, 2021

This inspection and exit interview were conducted with the licensee.
