Joe Breckenridge  
658 Dogwood Tree Rd.  
Reeds Spring, MO 65737

Customer ID: 321425  
Certificate: 43-A-5519  
Site: 001  
JOE BRECKENRIDGE

Type: ROUTINE INSPECTION  
Date: 11-AUG-2016

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

An adult female Boston Terrier (m/c# OAO2164504) had excessively long toenails, which were causing the digits to twist to the side when she stood on a solid surface. Excessively long toenails can be painful and can affect the gait of the dog. The licensee must ensure that toenails are trimmed to a comfortable length.

TO BE CORRECTED BY AUGUST 15, 2016.

### 3.1(c)(3)

#### HOUSING FACILITIES, GENERAL.

Cleaning.

An empty primary enclosure had an accumulation of old, moldy dog food on the floor. The licensee didn't know how long it had been since this enclosure had been cleaned and sanitized. The building had a strong moldy odor and the lactating female in the adjacent enclosure was coughing. Moldy food can cause odors and harbor pests that can carry diseases that can affect the health of the dogs. The licensee must clean and sanitize all surfaces in housing facilities when necessary to satisfy generally accepted husbandry standards and practices.

TO BE CORRECTED BY AUGUST 13, 2016.

### 3.3(a)

#### SHELTERED HOUSING FACILITIES.

The licensee had opened the door to a building previously used as a sheltered building to allow the 3 Australian Shepherds within free access to a fenced pen outside. The air conditioner had been turned off and the temperature inside the building was 93.1 degrees F. Excessive ambient temperatures cause discomfort and can result in overheating that can lead to serious health conditions in dogs.

Sheltered buildings must be sufficiently cooled to protect the dogs from temperature extremes and the temperature may not rise above 85 degrees F for more than 4 consecutive hours.

TO BE CORRECTED AUGUST 11, 2016.

Prepared By: KONNIE PLUMLEE, D V M USDA, APHIS, Animal Care

## Inspection Report

---

### 3.10

#### **WATERING.**

The licensee was using plastic swimming pools for the dogs to use for drinking and to cool themselves. Three plastic swimming pools and one rubber container, being used for drinking water by a total of 8 dogs, had green algae or dirt in them, which can affect the potability of the water and create disease hazards. The licensee must ensure that water receptacles are cleaned and sanitized as often as necessary to prevent an accumulation of dirt, algae, and other disease hazards.

TO BE CORRECTED BY AUGUST 12, 2016.

The inspection and the exit briefing were conducted with the licensee and an Animal Health Officer with the MO Dept. of Agriculture.
