2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

* The following medication used to treat the dogs at the facility have gone past its labeled expiration date. The recorded expiration date on one 500 ml bottle of Sterile Saline was 08/15. This medication is intermingled with other products that are currently being used at the facility and are therefore ready for use. The usage of expired medical materials such as drugs, fluids, or sutures on regulated animals is not considered to be an acceptable veterinary practice and does not constitute adequate veterinary care. The effectiveness of the dosage level and expected results when expired drugs are administered to animals could be drastically changed or may not work as anticipated. The expected results cannot be guaranteed and the animals may experience pain, distress due to mistreatment, unrelieved symptoms or unexpected side effects. Failure to properly label medications or other medical products as being expired and storing them with unexpired medical materials could lead to the unintentional use on regulated animals. The licensee must either dispose of all such expired medical drugs and materials or segregate them in an appropriately labeled, physically separate location from non-expired medical drugs and materials. Correct by 06/23/17.

#####

* The current written program of veterinary care had incomplete information pertaining to different species of animals maintained at the facility. Hedgehogs, Guinea Pigs, Hamsters, Ferrets and Chinchilla's were not listed on the current program of veterinary care. When the program of vet care is not completely filled out on how the licensee provides for the health and well-being of all animals on the premise, it is not considered to be adequate veterinary care. An accurate written program of veterinary care is important for the care of the animals and ensures clear and accurate communication between the facility and the attending vet. The licensee, in coordination with the attending veterinarian, must provide more specific information on the type of products used at the facility and the frequency of use. The licensee must ensure that the program of veterinary care is updated with current preventive practices to ensure that all animals are provided adequate veterinary care. Correct by 6/ 30/17.

#####

* The licensee stated that she was using "Front line" on her Hedgehogs. The program of veterinary care

maintained at the facility does have "Front line" approved to be used on dogs and cats. When the program of vet care is not completely filled out on how the licensee provides for the health and well-being of all animals on the premise, it is not considered to be adequate veterinary care. An accurate written program of veterinary care is important for the care of the animals and ensures clear and accurate communication between the facility and the attending vet. The licensee, in coordination with the attending veterinarian, must provide more specific information on the type of products used at the facility and the frequency of use. The licensee must ensure that the program of veterinary care is updated with current preventive practices to ensure that all animals are provided adequate veterinary care. Correct by 6/30/17.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

* There is a mixture of dirt, grease and other excreta accumulating on the interior wood wall of two enclosures. Six dogs are in contact with the affected surfaces located in shelter housing. The affected area covers approximately 40 percent of the enclosure wood wall. Cleaning of surfaces is necessary to prevent an accumulation of excreta and other disease hazards. This indicates an unsanitary living condition exists that could lead to potential disease or health risks. Surfaces which are not cleaned and sanitized properly or often enough, increase the risk of disease hazards for the dogs. Cleanliness is important to the health and well-being of the animals. All surfaces of housing facilities must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices. The licensee must ensure that all surfaces which any dog comes in contact with must be spot cleaned on a daily basis and sanitized in accordance with 3.11 (b) of this sub part to prevent accumulation of excreta and reduce disease hazards. Correct by 6/20/17.

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

* An accumulation of hair, cobwebs and dust was collecting on an estimated 50 percent of the white wood fence and 15 percent of the interior enclosure wall. Fifteen dogs are in contact with the above affected areas which is located on the interior of the south sheltered building. The accumulation of hair, cobwebs and dust create an unsanitary living condition that could impact the health and well-being of the dogs. It indicates a potential living area for other pests that are housed with the dogs. The licensee must ensure that premises where housing facilities are located, including buildings and surrounding grounds must be kept clean and in good repair to protect the animals from injury, to facilitate the husbandry practices required in this sub part and to reduce or eliminate breeding and living areas for rodents, other pests and vermin. Correct by 6/30/17.

3.31(b)

SANITATION.

* An accumulation of cobwebs and dust was collecting on an estimated 15 percent of two interior wood walls and

on a canvas. Five guinea pigs are in contact with the above affected area which is located in the upper interior room of the pet shop. The accumulation of cobwebs and dust create an unsanitary living condition that could impact the health and well-being of the guinea pigs. It indicates a potential living area for other pests that are housed with the guinea pigs. The licensee must ensure that premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this sub part. Correct by 6/30/17.

* The facility inspection done on 6/16/17 and exit briefing done on 6/19/17 were conducted with the licensee.
