Clinton, MO 64735

Customer ID: 11169  
Certificate: 43-A-4973  
Site: 001  
KIMBERLY COLEMAN

Type: ROUTINE INSPECTION  
Date: 13-NOV-2014

### 3.2(c)

#### INDOOR HOUSING FACILITIES.

##### (c) Lighting.

\* The whelping building housing approximately 66 puppies and 43 adults had no windows. Upon entering the whelping building, at approximately 1300 hrs, the lights were turned off and the room was dark except for the light produced by 11 heat lamps used to keep puppies warm. The licensee turned on three overhead/wall lights to provide more light for the inspection. Even with the lights turned on, there was not enough light to observe the dogs and puppies in the far back end of the building without using a flashlight. Sufficient light is necessary for adequate inspection of the animals and to ensure their well-being.

\*\* The licensee must ensure the whelping building provides sufficient illumination to aid in maintaining good housekeeping practices and adequate inspection of the animals. This light must be on a regular, diurnal cycle and uniformly diffused throughout the building. TO BE CORRECTED BY: This non-compliant item was corrected at the time of inspection.

### 3.11(a)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

##### (a) Cleaning of primary enclosures.

\* There were several sheltered enclosures that had an excessive accumulation of feces. Three of those enclosures were on concrete slabs and the others were on raised wire with plastic, solid resting surfaces. The licensee stated the enclosures were spot cleaned daily and a caretaker was in the process of cleaning the enclosures at the time of inspection. However, these enclosures contained as many as four to five dogs so an excessive amount of feces had built up since the last spot cleaning. The feces was smeared across the ground/floor and some of the dogs' paws and undercoats were wet and soiled with waste material. Two dogs had feces speckled throughout their coats, apparently from cagemates stepping in feces and then jumping up on the dogs. An excessive amount of feces in an enclosure greatly increases the chances of the dogs becoming soiled with fecal material which poses a health risk for them.

## Inspection Report

---

\*\* The licensee must ensure that excreta is removed from primary enclosures at least daily, or more often as necessary to prevent soiling of the dogs and to reduce disease hazards. TO BE CORRECTED BY: Close of business on the day of inspection. (Verbally instructed)

The inspection and a thorough exit interview were conducted with the licensee on 13 November 2014.
