Facilities, general.

During the inspection 3 piglets were observed running around the facility outside of their primary enclosure. There were two places along the lower portion of the primary enclosure fence that had enlarged openings. While standing near this fence the 3 piglets ran back into this enclosure. Failure to securely contain the animals in their primary enclosure could result in injury to these animals. All primary enclosures must be structurally sound and maintained in good repair to contain all animals. These holes must be repaired to ensure these piglets are securely contained.

This inspection and exit interview were conducted with a facility representative.
