Type: ROUTINE INSPECTION
Date: 26-OCT-2021

2.40(a)(1) Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

At the time of inspection, there is no written program of veterinary care. A written program of veterinary care is required to ensure that there is an expectation about the care provided to all animals. Failure to establish and maintain a written program of veterinary care can decrease the ability to ensure optimal care of the animals. A written program of veterinary care must be established and maintained so that the licensee has a plan for providing adequate preventative care and treatments as necessary.

2.75(b)(1) Repeat

Records: Dealers and exhibitors.

The licensee does not have records of acquisition for one alpaca and one Patagonian cavy, and does not have disposition records for six domestic goats, two zebu, nine donkeys, five sheep, one capybara, 14 llamas and one pig. Records containing the required information for animals disposed of or acquired for use in regulated activities, including those offspring born on premises, are necessary to accurately track animals to ensure their humane care and use. The licensee shall make, keep and maintain records of acquisition and disposition of all animals that fully and correctly disclose the required information.

3.125(a) Repeat

Facilities, general.

Inspection Report

In the enclosure containing one axis deer, three cattle, two bison, two zebu and one pig, there is a rusted, tubular frame attached to the fence with wire. The wire is twisted and cut so that the points could come into contact with the animals.

In an enclosure containing two pigs, there is chicken wire twisted around the fencing which poses a risk for injury of entrapment of the animals.

In the enclosure behind the house to which one kangaroo has access, there is sagging chicken wire with sharp points attached to the rear fence that could come into contact with the animal.

Loose wire and sharp points pose a hazard for animals. All enclosures must be constructed and maintained in good repair to protect the animals from injury.

This inspection and exit interview were conducted with a facility representative.
