Type: ROUTINE INSPECTION
Date: 17-MAR-2015

3.58(a)

CLASSIFICATION AND SEPARATION.

The rabbits are being housed with the guinea pigs, although the Business Manager stated that it was a temporary set up. Rabbits shall not be housed in the same primary enclosure with any other species of animals unless required for scientific reasons.

Correct by March 24.

3.125(a)

FACILITIES, GENERAL.

There is a portion of 1/2 inch wire mesh on the door to the kangaroo enclosure with sharp points of wire protruding. The sharp points pose a risk of injury to the kangaroo and must be removed.

The wire mesh fencing making up the enclosure for the goats, sheep and pigs is in disrepair. The inspector witnessed a small goat stuck between the chicken wire and outer wire mesh, it's head was caught in one of the openings and had to have assistance extricating it's head. There was no outward indication that it was injured. It appears to have entered between the 2 fences because the chicken wire mesh was rusted and broken with a large hole where it was bent and pulled away from the supports. The mesh fencing also has sharp ends of wires exposed. The fencing is not structurally sound and may not be secure enough to contain the animals housed there. There are several broken or loose boards on the outer pasture fence containing the cow, goat and llama. The materials used for the enclosures must be of the appropriate material and strong enough for the types of animals housed there. The damaged fence poses a hazard to the health, safety and well-being of the animals and must be replaced and or repaired.

Correct by March 19, 2015.

This inspection and exit interview was conducted with the Business Manager.
