2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***A male Bichon Frise #086.124.582 (approximately 12 yr old) had a heavy build-up of grayish brown material on the teeth. This abnormal build-up of material covered the majority of the teeth and extended into the gum-line. The gums had receded along some of these teeth and a creamy, grey to white material was noted along the gum line of some of these teeth. The abnormal build-up of material on the teeth can cause damage to the gum tissue and tooth structures. This can be painful, may decrease the dog's ability to eat normally and negatively impact the overall health of the animal. The licensee must develop and establish an effective dental care program as part of the overall program of veterinary care for the animals in the facility.

A female Boston Terrier # 4C13036D22 had areas of hair loss, with small reddened skin lesions within these areas, on the front of both front legs just above and just below the joints above the feet. The skin in these areas appeared flaky and pinkish red and each had a few pin head sized reddish skin lesions and/or brown scab-like skin lesions. These areas of hair loss and skin lesions could be the result of injury, infection or other veterinary medical condition which could negatively affect the health of the animal and/or may be uncomfortable. According to the licensee, neither of these dogs had been seen by a veterinarian nor were they being treated for these current conditions. The licensee must have these dogs seen by a licensed veterinarian in order to ensure that accurate diagnoses are made and that appropriate treatment plans are developed and followed. The licensee must document this information and make it available to the inspector upon request. All dogs must receive adequate veterinary care at all times.

HOUSING FACILITIES, GENERAL.

Cleaning.

***The outside portion of the sheltered building had fecal matter covering the flooring. In at least 4 enclosures on the north side and 3 enclosures on the south side, affecting approximately 12 dogs, the raised plastic flooring was mostly covered with fecal material. The fecal material was also caked in the square holes in the flooring in some places. The amount of smeared fecal material made it difficult for the dogs to stay out of it. The licensee stated they scrape out the enclosures daily, but only power wash about once or twice a week. There were also some walls that

had a brownish grime on them. Surfaces which are not cleaned and sanitized properly or often enough, increase the risk of disease hazards for the dogs or puppies. Cleanliness is important to the health and well-being of the animals. The licensee must ensure that enclosures are spot cleaned daily and sanitized at least every 2 weeks or more often if necessary to prevent an accumulation of dirt and grime and other disease hazards.

3.1(f)

HOUSING FACILITIES, GENERAL.

Waste Removal

***The washdown area under the outside sheltered enclosures had a build-up of feces. The excessive amount of feces in the washdowns caused odors and the drain holes were plugged with piles of feces. The build-up of dog waste prevented the washdowns to function properly causing the waste to back up and drain into the yard next to the kennels. Having waste close to the facility can attract pest and vermin that can harm the dogs. The licensee must provide for regular and frequent collection, removal, and disposal of animal and food wastes, debris, garbage, water and other fluids and wastes in a manner that minimizes contamination and disease risks. The waste disposal system must dispose the waste far enough from the facility to prevent odors, diseases, pests or vermin near the animals.

To be corrected by: January 29, 2017.

The 2.40 (b)(2) Veterinary Care NCI's from the 9/12/16 inspection for Beagles 031.256.609 and 103.576.099 had their toenails trimmed.

This inspection and a preliminary exit interview were conducted on 1/25/17 by Chad Proctor, ACI and Dr. Erika Leisner, VMO with the licensee. The report was reviewed and an exit interview was completed by Chad Proctor, ACI with the licensee on 1/26/17.
