Dade City, FL 33525

Customer ID: **16585**

Certificate: **58-C-0883**

Site: 001

STEARNS ZOOLOGICAL RESCUE AND REHAB

Type: ROUTINE INSPECTION

Date: 11-FEB-2015

3.75(a)

HOUSING FACILITIES, GENERAL.

The shelter for the capuchin/brown lemur was rotting in some areas.

Housing facilities for non human primates must be kept in good repair and restrict other animals from entering.

To be corrected by 4-30-2015.

3.84(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The marmoset enclosure had accumulation of fecal material and food which needs to be removed.

Excreta and food waste must be removed from inside each indoor primary enclosure daily and as often as necessary in order to reduce disease hazards, insects, pests, and odors.

To be corrected by 2-28-2015.

3.84(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The capuchin shelter had pieces of rotted 4x2 wood and an old plastic tarp on the floor. There were roaches under the tarp and what appears to be rodent droppings on top of the wood covering the lockout area of the shelter.

Buildings must be kept clean in order to provide and facilitate the required husbandry practices.

To be corrected by 2-28-2015.

Prepared By: LUIS NAVARRO, D V M USDA, APHIS, Animal Care

Inspection Report

3.125(a)

FACILITIES, GENERAL.

A tiger enclosure had a rusted detached pipe in a corner directly above the ground which compromises the integrity of the structure, another enclosure had sharp points which could cause injury to the tigers, another enclosure with a white tiger had a platform that was too close to the top of the enclosure fence which could result in the tiger jumping and escaping.

The deer enclosure fence had a 1 foot separation at the top of the gate entrance due to a pole that was bended towards the inside of the enclosure which could cause the head of a deer to be trapped in between.

The Serval enclosure had exposed underground wire which could potentially trap the cats paw and cause injury.

The black jaguar had a detached piece of wood which compromises the structural integrity of the platform.

To be corrected by 2-28-2015.

3.131(a)

SANITATION.

The Leopard enclosure had accumulation of excreta which appears to be in the area for more than 3 days. The black jaguar enclosure had pieces of bone trapped in between the platform and the wood wall by its side.

Excreta and food waste shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

To be corrected by 2-28-2015.

An exit interview was conducted with the facility representative.
