Type: ROUTINE INSPECTION
Date: 22-SEP-2015

2.40(a)(1) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The licensee uses a veterinarian under consulting arrangements to provide veterinary care for the animals but does not have a written program of veterinary care. The licensee does not have written guidance from the attending veterinarian regarding preventative care, treatment for routine and common veterinary problems, and / or emergency care.

In order to ensure problems of animal health are addressed adequately and in a timely manner, a written program of veterinary care should be maintained and followed.

This issue was cited previously, and the correction date is past due.

2.40(b)(3) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A ewe named "Maia" was observed to be limping. The owner had not yet consulted on this matter with the attending veterinarian.

The owners are responsible for ensuring that all animals are observed on a daily basis, and that any problems are promptly reported to the attending veterinarian, with appropriate treatment and follow up.

Failure to recognize medical problems, and failure to consult the veterinarian, could result in animal suffering and / or poor medical outcome.

To be corrected by 9/28/15.

3.125(a)

FACILITIES, GENERAL.

Inspection Report

The animal enclosures were not structurally sound, and contained hazards that could injure the animals:

- Cattle - Corrugated metal sections in fence-line, and on the ground, that had sharp edges. Welded wire fencing panels fastened together, or to posts, with twine. Openings between fencing and posts, with pointy ends, large enough for animals to entangle head or limbs. Laundry area with bottles of detergent and bleach accessible to cattle.
- Goats - Corrugated metal sections in fence-line, on the ground, and dangling overhead that had sharp edges. Welded wire fencing panels fastened together, or to posts, with twine.
- Sheep - Corrugated metal sections in fence-line that had sharp edges. Welded wire fencing panels fastened together, or to posts, with twine. Loose rods that have some unwelded from welded wire that pose a risk of entanglement.
- Llama - Welded wire fencing panels fastened together, or to posts, with twine, with gaps that could result in entanglement.

Enclosures should be constructed of materials, and of sufficient strength so as to be appropriate for the species. They should be maintained in good repair. They should adequately contain the animals, and protect them from injury.

The current state of these enclosures puts the animals at risk of escape and or injury. Steps should be taken to repair and maintain the enclosures.

To be corrected by 10/23/15.

3.131(c) REPEAT

SANITATION.

There was an excessive amount of clutter and an accumulation of discarded items on the grounds and in buildings near the animals.

The buildings and grounds should be kept clean and in good repair, in order to facilitate good husbandry, and to avoid creating habitat for vermin. Accumulations of trash should be removed. Failure to maintain good housekeeping could be detrimental to the well-being of the animals.

This issue was cited previously, with a past due correction date.
