Site: 001

SAN FRANCISCO ZOOLOGICAL
GARDENS

Type: ROUTINE INSPECTION

Date: 18-SEP-2024

3.152(b)

Facilities, outdoor

The outdoor flamingo enclosure contains 42 Chilean Flamingos in it and has only one tree to provide shelter to all the birds. Not providing adequate shelter from rain, winter winds, hot weather, and other inclement weather can have serious negative impacts on the health of the birds. It is important to provide adequate shelter to all animals to protect them from weather conditions. One or more shelter areas large enough to contain all the birds at one time must be provided to prevent their discomfort from adverse weather events. Shelter areas must provide sufficient space to comfortably hold all the birds at the same time without adverse intraspecific aggression or grouping of incompatible birds.

Corrected at the time of inspection on September 18, 2024.

3.153(a)(1)(i)

Primary enclosures.

The shelter area in the Binowee aviary containing several species of birds, has several nails sticking out of the walls. Sharp points or edges could injure birds. Housing facilities, including primary enclosures, must be constructed and maintained in sound repair to protect birds from injury.

Corrected at the time of inspection on 09/18/2024.

3.158(d)

Cleaning, sanitization, housekeeping, and pest control.

Accumulations of rodent feces were seen on the floor, on top of the bird feed refrigerator, and on the counter in Pod # 3 of the WCC area. Rodents can carry diseases which can contaminate feed and feed preparation areas and cause illness to the birds. Therefore, it is important to reduce contamination by pests in animal areas. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests must be established and maintained to promote the health and wellbeing of the birds and reduce contamination by pests in animal areas.

Correct by: September 27, 2024.
