Type: ROUTINE INSPECTION  
Date: 24-JUN-2021

---

### 2.40(b)(2)

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The Yak, "Blossom" had overgrown hooves on both back feet. The inner hoof of the right rear foot is misshapen with an angular curvature over the outer hoof. The hooves of the left rear foot also have abnormal curvature inward toward the middle of this foot. A young, male bison "Cupid" had overgrown hooves on both front feet with abnormal, inward curvatures of these hooves. Female Reindeer, "Spice", had overgrown hooves on all four feet. The hooves on all feet had abnormal inward curvatures. The dewclaws of all four feet were also severely overgrown with abnormal curvatures. The overgrown hooves of these animals did not appear to cause any lameness or gait abnormalities at time of this inspection. The overgrowth of hooves may cause the animals discomfort and lead to injuries or lameness if not appropriately addressed. The facility must establish and maintain an adequate program of veterinary care that includes a timely schedule of hoof trimming and care.

Correct by 07/10/2021.

A white, male sheep "Leonard" and a brown alpaca "Merlot" had unshorn, overgrown hair coats. The overgrown coats of these animals did not appear to affect movement or postural adjustments or cause visible discomfort or stress at time of inspection. Unshorn, overgrown hair coats may lead to stress, discomfort and medical issues in these animals including

overheating, underlying skin conditions or other injuries if not appropriately addressed. The facility must establish and maintain an adequate program of veterinary care that includes timely scheduling of shearing when needed.

Correct by 07/05/2021

### 2.75(b)(1)

#### **Records: Dealers and exhibitors.**

Records of acquisition/disposition for the facility's goats, sheep and seven reindeer were unavailable or incomplete.

Complete and accurate animal records must be kept current to facilitate identification and tracking of animals as well as to ensure their health and well-being. Records must be maintained that fully and correctly disclose all required information concerning all animals purchased or otherwise acquired, owned, held, leased, transported, sold, euthanized or otherwise disposed of and shall include any offspring born while in the licensee's possession.

Correct by 07/19/2021

### 3.125(a)

#### **Repeat**

#### **Facilities, general.**

There was an approximately 2-foot section of wire fencing along the bottom in the Zebu pen which was in disrepair. The wires in this section were bowed inward, crumpled, and broken apart with wire points protruding into the enclosure.

There was a sheep enclosure in disrepair. A section along one corner about 3 feet in length had a broken, jagged board behind areas of broken and loose wire fencing with pointed ends protruding into the enclosure. In another section of this enclosure was a large piece of a wooden panel in disrepair with a large opening having several broken, loose, splintered pieces.

Fencing materials including boards and wires which are broken, damaged and in disrepair may cause injury to the

## Inspection Report

---

animals. Animals may become entangled in broken fencing and sharp points may cause lacerations or puncture wounds. A system must be in place to ensure all enclosures are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

### 3.127(a)

#### Facilities, outdoor.

A sheep enclosure housing one sheep did not provide adequate shade. There were shaded areas in the enclosure; however, there was not enough coverage for the sheep's entire body during normal postural adjustments or movements. At time of inspection there was no indication of overheating or discomfort for this animal. Outdoor enclosures with inadequate shade may cause overheating or discomfort of the animals. Sufficient shade by natural or artificial means must be provided to all animals kept outdoors to protect themselves from the direct sunlight.

Correct by 07/02/2021

### 3.131(d)

#### Sanitation.

There was a heavy accumulation of rodent feces spread along the floor next to the walls and corners and on the shelves of a food storage shed for hoof stock. There is a pest control program in place for rodents including a few traps in this shed; however, it appears to be ineffective. Pests and vermin may contaminate food as well as harbor and spread diseases. A safe and effective pest control program must be established and maintained to protect the health and well-being of the animals.

Correct by 07/12/2021

This inspection and exit interview were conducted with the licensee.
