Type: ROUTINE INSPECTION  
Date: 20-JUN-2025

---

### 3.131(d)

#### Sanitation.

The facility has an ineffective pest control program that is not sufficient to control the pest population. In a shed at the facility, with bulk food storage and an opossum enclosure, there are areas of accumulated rodent feces primarily along the side and back walls. Several wall panels have smaller holes and a larger hole has been created on the floor along the front wall and behind a metal bin. Pests can post a hazard to the health and wellbeing of the animals by either injuring them, exposing them to potential diseases and illness, or contamination of the food. Correct by 18 July 2025 by establishing and maintaining a safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests.

### 3.158(a)(1)

#### Cleaning, sanitization, housekeeping, and pest control.

Several bird enclosures have surfaces that are not being cleaned frequently enough. The enclosures have accumulated amounts of excreta piled on the floor and against the wire mesh walls. Excessive excreta in primary enclosures can soil the birds, increase disease hazards, and attract pests into the enclosure. Correct by 4 July 2025 by removing excreta and food waste from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulation and soiling of the birds, and to reduce disease hazards, insects, pests, and odors.

This inspection and exit interview were conducted with the licensee.
