

Inspection Report

Hawes Farms Inc.
21923 Dersch Road
Anderson, CA 96007

Customer ID: **41800**
Certificate: **93-C-1060**
Site: 001
HAWES FARMS, INC.

Type: ROUTINE INSPECTION
Date: 22-OCT-2014

3.125(c)

FACILITIES, GENERAL.

There is an open bag of bed shavings for the pigs being stored directly on the ground. Storing supplies in such a manner may not adequately protect them against deterioration, molding, or contamination by vermin. A system should be in place to ensure bedding is being stored as required.

To be corrected by: November 5, 2014

3.125(d)

FACILITIES, GENERAL.

The Racing Pig Building has semi solid/liquid waste material accumulating under and at the back of the building. This material is being generated from the slatted floor inside the building and is overflowing to outside of the building. There is a heavy foul odor emanating from the liquid waste to the animal areas. At the rear end of the starting gate chute, there are heavy accumulations of pig excreta present. Accumulations of animal and food waste can adversely affect the health and well-being of the animals. A system should be in place to ensure the removal and disposal of animal and food wastes, bedding and debris on a regular schedule so as to minimize vermin infestation, odors, and disease hazards. The disposal facilities and any disposal of animal and food wastes, bedding, dead animals, trash, and debris shall comply with applicable Federal, State, and local laws and regulations relating to pollution control or the protection of the environment.

3.128 DIRECT

SPACE REQUIREMENTS.

There are 8 pigs, two per enclosure, being housed in enclosures that do not meet our minimum space requirements. The pigs are crowded and cannot move around easily. Failure to provide sufficient floor space to the animals may adversely affect their health and well-being. Enclosures should be constructed and maintained so as

to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement.

To be corrected by: November 5, 2014

3.131(a)

SANITATION.

There are two enclosures, with two cattle in each, which have a heavy accumulation of fecal material collecting within. The enclosures have not been cleaned for several days and the cattle cannot lie down without coming in contact with the waste material. Enclosures maintained in this manner may adversely affect the health and well-being of the animals. A system should be in place to ensure excreta is removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

To be corrected by: November 5, 2014

3.131(d)

SANITATION.

The outside walls of the Pig Racing Building are covered with flies. There are hundreds of flies present and there is no pest control program in place. The back wall of the building is directly above a puddle of pig excreta that has overflowed from the building. The presence of flies can transmit disease and can cause discomfort to the animals. A safe and effective program for the control of insects should be established and maintained.

To be corrected by: November 5, 2014

An exit briefing was conducted with the facility representative.
