Type: ROUTINE INSPECTION
Date: 04-NOV-2016

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

One, white female mini pot bellied pig was observed to have an intermittent severe protrusion of the lower jaw and foam accumulated on the side of her mouth. This deformity could be due to a congenital disorder or injury. The manager stated that this issue was observed a few weeks ago and notified the veterinarian. However, there was no diagnosis and treatment plan documented on file. This pig needs to be seen by a licensed veterinarian to determine the diagnosis and implement an effective treatment plan for the facility to follow.

TO BE CORRECTED BY: 11 November 2016

3.131(c) REPEAT

SANITATION.

HOUSEKEEPING -

The following items are still in need of repair, replacement or removal-

*There is a detached metal strip on the inside of the coatimundi enclosure. This piece of metal could harm the coatimundis housed therein.

*The linoleum floor, in the room holding rabbits, guinea pigs, sugar gliders and a kinkajou, is still torn in several locations.

*The ceiling in this same room is detaching from the framework and sagging over enclosures.

*The tiled floor, in the male pot bellied pig enclosure, is missing several tiles thus exposing the concrete sub-floor.

Fecal material and other debris can accumulate in these damaged areas. The damaged linoleum and missing tiles

Inspection Report

must be removed, repaired or replaced to keep the floors in good repair in order to facilitate the prescribed husbandry practices.

*Additionally, the pot bellied pig's enclosure wall has been damaged with a knife. These holes leave the wall in disrepair.

*The accumulations of empty enclosures, tanks, boxes, household items, spilled bedding and other miscellaneous materials, that were stored haphazardly throughout the rear rooms of the facility, have been partially removed. The items that remain are better organized but remain stored in such a manner that creates areas that may harbor pests. These areas must be still be cleared and appropriately organized in order to facilitate the prescribed husbandry practices.

This inspection and exit briefing was conducted with the facility manager.
