Site: 001
Peeps and Creeps Inc.

Type: ROUTINE INSPECTION
Date: 14-JAN-2025

2.1(b)(2)(ii)

Requirements and application

During the first day of this inspection, it was noted that the licensee acquired two, one-year-old spider monkeys ("Mike" and "Jones"). The current license permits only Classes 1-4 of non-human primates; spider monkeys are a brachiating species, categorized as Class 6. During the second day of this inspection, these spider monkeys were no longer present, and an employee stated that the former owner that surrendered the animals to the facility changed her mind and wanted to reclaim the animals.

Licenses authorizing the use of specific species types in subparts D and F are issued based upon successful passing of a pre-licensing or re-licensing inspection to verify that the licensee is presently equipped and able to provide the appropriate husbandry and veterinary care needs of the species they possess or will possess for use in covered activity. The facility must apply for and secure a license to include Class 6 non-human primates before obtaining these animals for use in covered activities or housing them among animals used in covered activity.

TO BE CORRECTED FROM THE DATE OF THIS INSPECTION ON 01/14/2025

2.75(b)(1)

Repeat

Records: Dealers and exhibitors.

There is no record of disposition for one adult great horned owl that was present at the last inspection but not present at the time of this inspection. There is no record of acquisition for one adult female canary and one adult male canary present at this inspection.

Records containing the required information for animals disposed of, or acquired for, use in regulated activities (including those offspring born on premises) are necessary to accurately track animals to ensure their humane care and use. The licensee must make and maintain records of the inventory, acquisition and disposition of all animals which fully and correctly disclose the required information; these records must be furnished within a reasonable amount of time and as may be specified in the request for information.

2.75(b)(1)(iii)

Records: Dealers and exhibitors.

There is an acquisition record for two, one-year-old male spider monkeys named "Mike" and "Jones" (reportedly surrendered to the licensee from a client) that does not list the driver's license number and state (or photographic identification card for non-drivers issued by a state) for the relinquishing owner's name as required in the absence of a

USDA license or registration number. Another acquisition form for an adult male macaque named "Petey" (which lists only the word "bennet" in the species field) is missing the driver's license and state and the vehicle license number and state that should be provided in the absence of a USDA license or registration number. Neither acquisition form lists the licensee's name and address as the receiver of the animal.

Records containing the required information for animals disposed of, or acquired for, use in regulated activities (including those offspring born on premises) are necessary to accurately track animals to ensure their humane care and use. The licensee must make and maintain records of the inventory, acquisition and disposition of all animals which fully and correctly disclose the required information; these records must be furnished within a reasonable time and as may be specified in the request for the information.

TO BE CORRECTED BY 01/31/2025

2.134(b)

Contingency planning.

A facility employee stated that they believed an annual review of the Contingency Plan was done in October of 2024, but there were no records to document this.

The licensee must ensure not only that a Contingency Plan is in place, but also that it is reviewed at least once annually to ensure it adequately addresses the criteria listed in paragraph (a) of this section and is still relevant to the facility and animals. The plan must provide for the humane handling, treatment, transportation, housing, and care of their animals in the event of an emergency or disaster. The licensee must maintain documentation of the annual review, including documenting any amendments or changes made to the plan since the previous year's review.

3.80(a)(2)(i)

Repeat

Primary enclosures.

The indoor portion of the primary enclosure housing one adult male ring-tailed lemur named "Maurice" has rusted areas of metal, some of which have rusted through on the lower metal bars to produce holes and sharp points.

Rusted metal is porous and cannot be easily cleaned and sanitized; rusted-through metal creates sharp points that can injure the animals. The licensee must ensure that any surfaces that come in contact with non-human primates are free of excessive rust that prevents the required cleaning and sanitation or that affects the structural strength of the surfaces, and that all surfaces are free of jagged edges or sharp points.

3.81(b)

Environment enhancement to promote psychological well-being.

At the onset of this inspection, there were two one-year-old male spider monkeys with minimal enrichment inside their primary enclosure, and no enrichment provided specifically to facilitate brachiating locomotion. The enclosure contained only a wooden log on the floor, a hanging fabric hammock/pouch and two blankets. These animals were not present the following day during the continuation of the inspection; the facility representative stated the animals were reclaimed by their former owner.

True brachiation in this enclosure is not possible for these animals due to lack of enrichment and structures that would allow this species-specific behavior. Failure to provide structures for normal behavior and movement of species such as brachiating nonhuman primates may result in deteriorating health and psychological welfare. The licensee must ensure

3.84(d)

Repeat

Cleaning, sanitization, housekeeping, and pest control.

In the outdoor portion of the enclosure containing one adult male ring-tailed lemur named "Maurice" there are heavy accumulations of bird excreta from wild birds on the low hanging foliage of the trees, the dirt and cement floor, and enrichment items.

Bird droppings can contaminate food and water and spread disease to non-human primates. The licensee must establish and maintain an effective program for control of birds and mammals that are pests, so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

3.125(a)

Repeat

Facilities, general.

In the enclosure housing one adult, male African crested porcupine there is an area of approximately eight square feet under a bridge feature where the animal dug and exposed the buried wire grid paneling, creating spaces large enough for his feet to pass through.

Exposed wire with large holes under an animal can result in injury or entrapment. A system of facility monitoring should be in place to ensure all enclosures are structurally sound and maintained in good repair to protect the animals from illness or injury.

This inspection and exit interview were conducted with a facility representative.
