

## Inspection Report

Larry R Farmer  
711 Wink Ave  
Oakley, KS 67748

Customer ID: **4091**  
Certificate: **48-C-0007**  
Site: 001  
Larry Farmer

Type: ROUTINE INSPECTION  
Date: 12-JUN-2014

### 2.131(d)(2)

#### HANDLING OF ANIMALS.

The licensee is offering animal feed to the visiting public. There are large enough gaps in the sheep and goat enclosure fences where the animals can place their heads through these openings. There is the potential that the public can hand feed these animals and an attendant is not available at all times of this direct public contact. Insufficient attendant supervision of animals during times of public contact can leave animals at risk for improper handling and feeding of items by the public other than what is provided for the animals. Sufficient number of responsible, knowledgeable, and readily identifiable employees or attendants must be present at all times during periods of public contact. Correct by 12 July 2014.

### 3.50(a)

#### FACILITIES, GENERAL.

There are broken welds in the welded-wire fence for the enclosure housing one rabbit. This is resulting in a gap and wire points. These may cause injury to the rabbit. All enclosures must be maintained in good repair to protect the animals from injury. Correct by 26 June 2014.

### 3.127(d)

#### FACILITIES, OUTDOOR.

There are numerous places where the established perimeter fence is inadequate. There are gaps of several inches between the lower section of the fence and the ground, there are sections of fence that consists of metal pipe fence with large gaps present, and there is one metal pipe gate that is not 6 feet in height. Inadequate perimeter fence may not restrict animals and unauthorized people from entering the facility. The perimeter fence must be at least 6 feet in height and have small enough openings that restrict animals and unauthorized people from entering the facility. Correct by 12 July 2014.

### 3.131(d)

#### SANITATION.

Prepared By: KENDALL LUNDY, A C I USDA, APHIS, Animal Care

Received by Title: LICENSEE

Date:  
12-JUN-2014

## Inspection Report

---

There were numerous rats observed in and around the red building that is located adjacent to the pig enclosure as well as in the pigs' enclosure including their feeder. These rats were also seen drinking from the pigs' automatic waterer. Rats can transmit diseases to the animals. A more effective method of pest control must be established to control these rats. Correct by 26 June 2014.

Inspection and exit interview conducted with facility representative.
