Customer ID: **926**

Certificate: **56-R-0002**

Site: 001

Clemson University - LaMaster
Dairy

Type: ROUTINE INSPECTION

Date: 22-JUL-2024

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

A principle investigator administered a higher volume of a different product, deviating from the protocol previously approved by the IACUC involving two pigs. The pigs underwent procedures for approved protocol XXXXXX97, where the procedure described: injecting 4-5 ml of a solution, in up to twelve injections sites using the solution concentration specified. The facility had a lower active unit of the solution on hand. This resulted in the research team using higher volumes of this solution in an attempt to achieve the approved concentration outlined in the protocol, likely exceeding the twelve approved injections.

Failure to follow the approved protocol and making unapproved changes does not allow the IACUC to review these changes as required and ensure the animals involved do not experience negative impacts to their health and well-being. To ensure the humane treatment of animals, the IACUC must review and approve, require modifications in, or withhold approval of proposed significant changes regarding the care and use of animals in ongoing activities.
Correct by August 9, 2024.

This inspection and exit interview were conducted with the facility representatives.
