Type: ROUTINE INSPECTION  
Date: 22-APR-2014

### 3.127(d)

#### FACILITIES, OUTDOOR.

\*\*\*There is a 5 foot property perimeter fence that it is not continuous in some areas. The two camel pastures are not withing a 6 foot perimeter fence on all sides. The camel enclosures are 5 foot high constructed of 4 rung wood boards with electric wire across the top of the fence. High tensile wire panels are attached to the board fencing. Outdoor housing facilities must be enclosed by a perimeter fence that is at least 6 feet in height and of sufficient distance from the outside primary enclosure to keep animals and unauthorized persons out. An appropriate perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility. The appropriate fence would also function as a secondary containment system for the animals in the facility. Correct by August 1, 2014

### 3.131(c)

#### SANITATION.

\*\*\*The decorative board fencing along the tree line of the enclosure has detached boards and is in disrepair. The wire panel fencing and gates along the tree line are loosely attached. Premises shall be kept in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this subpart. The fence needs to be removed or replaced to protect the animals from injury. Correct by April 28, 2014

An exit briefing was conducted with the facility representative.
