ERIC CROWELL

Type: ROUTINE INSPECTION

Date: 26-FEB-2015

3.26(b) REPEAT

FACILITIES, INDOOR.

When entering the primary building where the hamsters were stored, there was a smell of ammonia at the entry of the facility. The odor was most offensive when first entering the building, and was less noticeable in the areas where there were AC units and other methods of ventilation (fans).

Additional ventilation is needed to reduce these odors throughout the facility and provide the animals with fresh air.

Correct by: March 13, 2015

Routine inspection and exit interview conducted with facility manager.

Prepared By: SIMONE TOMLINSON, D V M USDA, APHIS, Animal Care
