Type: ROUTINE INSPECTION
Date: 17-JUL-2014

3.2(b)

INDOOR HOUSING FACILITIES.

3.2b Indoor housing facilities, Ventilation

The ammonia levels inside the whelping barn were so high that the inspectors experienced irritation to their eyes and in their throats. Indoor housing facilities must be sufficiently ventilated at all times when dogs are present to minimize odors, ammonia levels and provide for their health and well-being.

Affects 23 dogs
Correct by: 07/25/14

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

3.6 a 2 i Primary enclosure

In the whelping barn, a majority of the enclosures have dividing walls that the sharp ends of the screws have penetrated through. The sharp screw ends are at the level of the dogs. One enclosure has a loose bracket and the end is pointed into the enclosure at the level of the dog. Sharp points or edges could cause injury to the dogs and should be removed or repaired.

Affects 20 dogs
Correct by: 07/25/14

3.11(b)(2) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

3.11 b 2 Cleaning, Sanitization, Housekeeping, and Pest Control

Inspection Report

There is a buildup of dirt on the walls of the dog enclosures in the whelping barn. These walls should be cleaned and sanitized every two weeks to prevent the accumulation of dirt, debris, food waste, and other disease hazards.

Also, in the whelping barn, there are food and water bowls that have been chewed around the top edge. The edge has become jagged and pitted, allowing dirt and grime to penetrate into the surface of the bowls. This does not allow for proper cleaning and sanitization of the bowls. The bowls should be replaced or altered in a manner that allows for proper cleaning and sanitization to occur every 2 weeks.

Affects 23 dogs

Inspection and exit interview was done with facility representative.
