SPACE REQUIREMENTS.

Section 3.128 Space requirements: The two capybara are housed in an enclosure without a water receptacle that is large enough for them to at least submerge their bodies into water. The capybara have a water dish in the shelter and a rubber tub with about 2 inches of water outdoors. Under natural conditions capybara spend a significant portion of their time in water. Compliance with space requirements means there should be both dry and aquatic portions of the primary enclosure, each which, at a minimum, provide sufficient space to allow the animal to make normal postural adjustments with adequate freedom of movement. During warm weather the capybara have access to an outdoor pool which is empty of water now. Correct by providing the capybara a water receptacle for the shelter that is large enough and deep enough for them to submerge their bodies into the water and move in the water when they do not have access to their outdoor pool. Correct by February 24, 2016.

An exit briefing was conducted with the facility vice president.
