Type: ROUTINE INSPECTION
Date: 22-JUL-2025

3.125(a) Critical

Facilities, general.

A prairie dog had escaped through multiple hot wires, and a gate gap of approximately 2 inches (the gate attaches to the wall bolts to allow it to swing open/close) in the outdoor enclosure. The prairie dog was observed by facility staff outside of its enclosure and staff attempted to capture the animal. The animal evaded net capture and was eventually caught in a culvert off property. The animal was unable to be removed safely and was euthanized following Veterinary Protocol. The facility must ensure that all housing facilities are maintained in such a manner to protect and contain the animals within. The facility has reconfigured the wires at the gate attachments.

* Corrected at time of inspection on 7/22/2025

This inspection and exit interview were conducted with facility representatives.
