NOAHS PARK RETREAT INC

Type: FOCUSED INSPECTION

Date: 14-OCT-2021

---

### 3.50(a)

#### Facilities, general.

Jagged wire was observed at the back side of the rabbit enclosure. This condition could cause harm since sharp jagged edges could potentially injure the animal. Indoor housing facilities for rabbits shall be structurally sound and shall be maintained in good repair, to protect the animals from injury,

\*\*\*\*\*Correct by November 15, 2021

### 3.75(c)(1)(i)

#### Repeat

#### Housing facilities, general.

There was a build up of rust observed on the wire bars in multiple marmoset enclosures. Rust can impede cleaning and sanitizing of the material as well as compromise the wire bar integrity and strength. Enclosures need to be properly maintained or replaced when necessary in order to prevent an excessive rust buildup. The facility must correct this issue.

### 3.75(e)

#### Housing facilities, general.

The food storage area as well as food prep area and refrigerators containing marmoset diet was found in unsanitary condition. The refrigerator had multiple areas of caked on debris and grime. The food prep area was observed with large amounts of clutter and miscellaneous items in the area around the sink. Areas where food is stored must be maintain in a manner which will prevent and minimize contamination of the primary diet. Food storage facilities must be free of clutter

## Inspection Report

---

and debris and maintain in a sanitary condition. Only the food and bedding currently being used may be kept in animal areas, and when not in actual use, open food and bedding supplies must be kept in leakproof containers with tightly fitting lids to prevent spoilage and contamination.

\*\*\*\*\*Correct by November 15, 2021

### 3.76(b)

#### Indoor housing facilities.

The area where the marmosets are being housed does not have sufficient ventilation. This area is a basement with no functioning windows. Animals housed continuously in a space with poor air quality can develop health issues. These conditions can have an overall negative impact of the health of the animals. Ideally the animals should be moved from the basement space or measures should be taken in order to improve the air quality and allow for additional ventilation. Indoor housing areas must be sufficiently ventilated at all times to provide for the health and well-being of nonhuman primates and to minimize odors, drafts, ammonia levels, and moisture condensation.

\*\*\*\*\*Correct by November 15, 2021

### 3.84(b)(2)

#### Cleaning, sanitization, housekeeping, and pest control.

There was an excessive buildup of grime and debris in multiple marmoset enclosures. The frequency which these enclosures are being sanitized is not adequate to prevent an excessive buildup of debris. Excess debris on enclosure surfaces can harbor bacteria and disease. Sanitization frequency must be performed at regular intervals as to prevent excessive accumulation.

\*\*\*\*\*Correct by November 15, 2021

### 3.126(b)

#### Facilities, indoor.
