CHESTATEE WILDLIFE
PRESERVE

Type: ROUTINE INSPECTION

Date: 15-SEP-2021

3.84(d)

Cleaning, sanitization, housekeeping, and pest control.

Many rats were seen running in and out of the non-human primate complex made up of 4 chain link enclosures. Three of the enclosures contained individually housed macaques while the fourth housed three lemurs. The rats could be seen running through the underbrush in one of the macaque's enclosures, climbing the fencing, as well as eating and drinking from the primate's food/water containers. Rats are pest that can transmit disease and cause sanitation issues which can negatively affect the animal's general health. The facility must establish and maintain an effective program for control of pests including pest mammals.

Correct by: 11/01/2021

This inspection and exit interview were conducted with a facility representative.

Additional Inspectors:

STEPHANIE MAYARD, VETERINARY MEDICAL OFFICER
