Type: ROUTINE INSPECTION
Date: 21-JUL-2014

2.38(f)(1)

MISCELLANEOUS.

Handling. During the weekend of July 19th 2014, an investigator had begun to train several bats and separated them from the main housing area to individual wire mesh enclosures within the bat housing room. Those enclosures had not been used in several months. Neither the animal care staff nor were other laboratory members informed of the change in housing for those animals therefore the animals were not fed over the weekend. Upon their discovery, the animal care staff initiated treatment yet 3 died. The facility has instituted a plan of correction to prevent further recurrence.

This item has been addressed and was a self-reported incident to the USDA by the facility.

The inspection was conducted on July 21-22nd 2014 followed by an exit briefing with the Program Director on July 22, 2014.

Additional Inspectors

Mcintosh Ashley, Veterinary Medical Officer
