Type: ROUTINE INSPECTION
Date: 13-MAR-2025

3.75(c)(3)

Housing facilities, general.

There is an accumulation of old food waste stuck in the wire mesh at the front of the owl monkey enclosures. These enclosures also have a build up a dark brown material on the perches and food stations. Not maintaining appropriate levels of cleanliness in areas where non-human primates come in contact can result in an excessive build-up of materials, which can increase the disease risk for the animals contained within. Per the regulations, hard surfaces with which nonhuman primates come in contact must be spot-cleaned daily and sanitized in accordance with § 3.84 of this subpart to prevent accumulation of excreta or disease hazards. If the species scent mark, the surfaces must be sanitized or replaced at regular intervals as determined by the attending veterinarian in accordance with generally accepted professional and husbandry practices. To be corrected by April 1, 2025.

3.84(d)

Cleaning, sanitization, housekeeping, and pest control.

In the indoor portions of the squirrel monkey enclosures, there is an excessive accumulation of rodent droppings present on the floor. The facility stated that it is difficult to keep rodents out of the squirrel monkey shed during the winter. There is evidence that the facility has patched holes in the shed; however, the current pest control program is not effective in this area.

Pests such as rodents can spread disease and contaminate food, surfaces, and animal housing areas. An effective program for control of insects, external parasites affecting nonhuman primates, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

To be corrected by April 1, 2025.

3.154

Environment enhancement to promote psychological well-being.

At the time of inspection, a written environment enhancement plan has not been established to promote the psychological wellbeing of the birds.

Failure to establish and maintain a plan for environment enhancement can result in the behavioral, social, and psychological needs of the birds not being met. The plan must address at a minimum social grouping, environment

enrichment, special considerations, restraint devices, and any birds that are exempted by the attending veterinarian because of health issues or other conditions. The plan must be approved by the attending veterinarian. The facility must establish and maintain an environment enhancement plan for the birds.
To be corrected by April 18, 2025.

This inspection and exit interview were conducted with the licensee.
