Type: ROUTINE INSPECTION

Date: 13-MAY-2015

2.40(x)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b)(2)

*****At time of inspection the Plan of Veterinary Care under Section II Dogs and Cats A pertaining to Vaccinations had none listed.

The PVC was updated on 2/11/15 but the vaccination section was left blank. This needs to be readdressed with the attending veterinarian and this section updated to reflect the vaccinations each animal will receive and the frequency of administration. These vaccinations will continue to help in the well-being and good health of the animals in question.

To be corrected by: 6/15/15

2.126

ACCESS AND INSPECTION OF RECORDS AND PROPERTY; SUBMISSION OF ITINERARIES.

(c)

*****At time of inspection the previous itinerary provided by the licensee dated 3/18/15 had all animals that were at that time out on exhibit to be returning to the home facility by April of this year. No itinerary showing exhibition dates after that time has been received by the regional office of AC as of the date of this inspection. At time of inspection two groups of animals were out away from the facility being exhibited. The licensee needs to provide USDA, AC with a current itinerary showing all dates of exhibition, locations and animals being exhibited. If the animals are not going to be back at the home facility following the last dates listed a new itinerary needs to be forwarded or it is assumed that the animals have returned to the home facility.

To be corrected by: 2 days from the receipt of this inspection report by the designated person for inspection.

Inspection Report

3.75

HOUSING FACILITIES, GENERAL.

(c) (1) (i)

***** At time of inspection the spider monkey cage on the inside had many areas where the metal had become rusted and was preventing the ability to properly clean and sanitize this cage. This rusted metal needs to be covered with a material which enables proper cleaning and sanitizing or must be replaced.

To be corrected by: 7/15/15

3.75

HOUSING FACILITIES, GENERAL.

(b)

***** At time of inspection the building which the spider monkeys are located in is cluttered with items that are not related to the daily equipment required for the husbandry needs of the non-human primates. These include items such as a tractor, hay, pipe, 55 gallon barrel, horse equipment just to name a few. animal areas inside of the housing facilities must be kept neat and free of clutter, including equipment, furniture, or stored material. All items not essential to the required husbandry of the non-human primates need to be removed from the building and the building kept neat and clutter free or the non-human primates need to be housed in an area separate from the daily operations being carried out for the rest of the facility.

To be corrected by: 7/15/15

3.77

SHELTERED HOUSING FACILITIES.

(c)

***** At time of inspection the lighting provided to the indoor area of the sheltered housing facility for non-human primates failed to provide enough light to permit routine inspection and cleaning of the facility, and observation of the non-human primates. Lighting must be uniformly diffused throughout animal facilities and provide sufficient illumination to aid in maintaining good housekeeping practices, adequate cleaning, adequate inspection of the animals, and for the well-being of the animals.

3.81

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

***** At time of inspection the plan for Environmental Enhancement to promote psychological well-being and any logs or documentation showing the plan was being followed was unavailable for review when requested by APHIS officials.

This plan and supporting keeper logs or documentation showing the dates of application, and portions of the plan used should be available for inspection review if requested by APHIS officials during times of inspection.

To be corrected by: Next inspection or request by APHIS officials.

3.125

FACILITIES, GENERAL.

(a)

***** At time of inspection the following areas within the tiger enclosures and in the construction of the enclosures need to be repaired or replaced to prevent injury, to contain the animals safely and keep the enclosures and housing in good repair and structurally sound.

1. The tiger housing units are constructed with concrete block and mortar walls, angle iron framed top with plywood or plywood covered material for roofs. The floors are concrete and have been covered inside by a pallet and plywood construction covered with straw or a hay bedding material. These floors have rotted to the point that portions of the plywood is missing and allows for the potential of injury to a tigers paws and leg if one passes through these rotted and missing wood areas and becomes trapped. these wooden floors need to be repaired or replaced to prevent injury and make them structurally sound.

2. One of these roofs of the tigers housing units has a section of the material covering the plywood which is damaged and needs to be replaced.

3. The roof of the tiger enclosure is covered with steel wire panels and a portion with steel metal used for roofs and sidewalls construction. The panels on the west side of the roof have been attached to the support pipe and framework of the enclosure with various size clamps to insure it is attached. The panels on the east side of the roof have not. They are simply laying on the pipe roof supports and framework for the sidewalls and overlap one another

Inspection Report

as it is constructed out of various sizes of panel. Within the enclosure are various climbing structures which allows for the potential for escape. this section and all sections of the roof need to be attached properly to all wall sections, roof support pipes and one panel to the other to minimize the potential for escape from the enclosure.

4. There are various areas of the metal used in the construction of the tiger enclosures which are rusted and can affect the metals structural integrity if not prevented from continuing to rust.

To be corrected by: 8/15/15

3.131

SANITATION.

(c)

***** At time of inspection in the immediate area of the tiger housing and enclosures were a variety of materials not in use for the daily husbandry practices of these animals. these consisted of a pile of used brick with grass up through the pile. There was metal roofing material one sheet which was not being used as well as one which had just blown off of the roof structure recently. Assorted pipe, a two legged wooden table tipped on its side an unused dog house and other miscellaneous items. These items all need to be stored away from this animal area as they provide areas for snakes, mice, field rats and other unwanted animals to hide which can potentially cause disease or injury to the tigers in these enclosures.

6/15/15

This inspection and exit interview conducted by APHIS, USDA, Animal Care Personnel and the designated person for inspection.

This is an electronic version of the word document inspection report dated 5/13/15 and delivered to the designated person for inspection for signature on 5/15/15
