Type: ROUTINE INSPECTION
Date: 21-MAR-2023

3.76(a)

Indoor housing facilities.

On July 14, 2022, the registrant was notified in real-time by an internal alert system that the ambient temperature exceeded 85F for more than 4 consecutive hours in room 302 of an indoor facility. This room housed 7 adult pig-tailed macaques. Staff took actions including ensuring the monitoring system was working correctly, activating an additional HVAC system and employing floor fans in the room. Despite these corrective actions, environmental monitoring records show the temperature to be between 85F to a maximum of 88.2F between July 14 and July 18, 2022, for 5 time periods lasting from 4 to 9.5 consecutive hours. Readings returned to acceptable ambient temperatures below 85F by 1:30pm on July 18, 2022. During the temperature excursion events, the animals were monitored and found to have no adverse health effects.

Temperatures that remain elevated for longer than 4 consecutive hours may have adverse health and well-being effects on nonhuman primates. The registrant must ensure that the ambient temperature at indoor facilities does not exceed 85F for more than four consecutive hours when nonhuman primates are present. Corrected before the time of inspection on March 21, 2023.

This inspection and exit interview were conducted with the facility representatives.
