DONALD SCHRAGE

Type: ROUTINE INSPECTION
Date: 14-OCT-2014

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

DIRECT: There was a female Golden Retriever (tag# 083) that was squinting her left eye and the eye appeared discolored. On closer observation, most of the surface of the left eye had an uneven appearance which was also opaque and whitish-blue in color. There was a small irregular-shaped circular lesion with a white outline present on the upper surface of the eye closest to the nose. Viewing from the side of the animal, closest to the left ear, it appeared that there was a reddish-brown discoloration inside the left eye. This eye condition could be the result of injury, infection or other veterinary medical condition which could be painful or may cause blindness. The licensee must have this animal seen by a licensed veterinarian no later than October 15, 2014 in order for an accurate diagnosis to be made and an appropriate treatment plan to be developed and followed. The licensee must ensure that all animals receive timely and adequate veterinary care at all times.

There were two bottles of expired medication found inside of the whelping building that were recently used or ready for use on dogs and/or puppies. A bottle of Sterile Water expired on Oct 12, and when questioned by the inspectors the licensee stated that he "had last used this product about 1 month ago" and a bottle of Pyrantel Pamoate Suspension expired on 05/14, and when questioned by the inspectors the licensee stated that he "switched to Panacur about 3 weeks ago". Expired medications may be contaminated, may not work as expected, and could harm the animals. All medications used on the animals must not be expired in order to protect the health of the animals. Licensee must ensure that all medications maintained for and used on the animals are not expired at all times.

3.6(a)(2)(5)

PRIMARY ENCLOSURES.

Wet and dirty dogs

In three outdoor enclosures, housing 8 adult dogs, there are large puddles of water with the majority of the

Inspection Report

enclosure being wet and muddy. The dogs in these enclosures were observed with varying degrees of wet and dirty hair coats, especially on the dogs' paws, legs, chest & abdominal areas. When the dogs' hair coats become wet and dirty it can decrease the comfort and well-being of the animals as well as increase the risk of disease hazards. The licensee must facilitate the drainage issue in these enclosures and ensure that all primary enclosures are constructed and maintained so that all the dogs remain clean and dry.

To be corrected by: 15 Oct 14

Inspection and exit interview conducted with licensee. The dog's previously identified with veterinary care issues: A female black Cocker Spaniel tag #037, a female Boston Terrier tag #095, a male Boston Terrier tag #89, A female Poodle tag#161, a female Pomeranian tag #146 have been addressed.
