ARIZONA-SONORA DESERT MUSEUM

Type: ROUTINE INSPECTION

Date: 31-JUL-2018

3.125(a) CRITICAL

FACILITIES, GENERAL.

On the morning of July 9, 2018 a keeper found a young male ringtail, Stevie, with his tail caught in the space between the metal wall and the wall of the building of his enclosure. The grey fox in the adjacent enclosure chewed off approximately 12 cm of the distal tail of the ringtail. He was also missing the 3rd and 4th digit claws of his left front paw, along with a partial thickness laceration on the medial aspect of the 3rd digit. The damaged portion of the tail was amputated and he is currently recovering in the medical building.

Enclosures for all animals must be constructed in a manner so that they contain the animals securely, in order to protect the animals from injury.

The staff has now sealed the gap between the metal wall and the wall of the building of the enclosure, ensuring the animals housed in either enclosure cannot have access to each other. The facility should continue to monitor all enclosures to ensure that they adequately contain the animals housed within. A system of timely identification, maintenance, and repair of facilities must be in place to ensure the health and well-being of all animals.

This inspection and exit interview were conducted with the facility representatives.
