Type: ROUTINE INSPECTION
Date: 03-JUN-2016

3.130

WATERING.

There was a mild accumulation of brown organic matter collecting on the bottom of the water receptacles in the goat, pig, sheep, and alpaca enclosures. During the inspection, the facility representative began cleaning out and filling up the water receptacle in the pig enclosure.

Water receptacles should be kept clean as required for the health of the animals. A system should be in place and maintained to ensure all water receptacles are kept clean and sanitary.

To be corrected for all future inspections.

3.131(a)

SANITATION.

There was a moderate accumulation of expired food (corn husks) in the pig, alpaca, and sheep enclosures. There was also a vacant enclosure adjacent to the pig enclosure that was maintained in the same condition. Expired food may attract pests and increase disease hazards to animal areas.

A system should be in place to ensure expired food and other debris are removed from primary enclosures as often as necessary to prevent contamination to the animals contained therein and to minimize disease hazards and to reduce odors.

To be corrected by July 1, 2016

An exit briefing was conducted with the facility representative.
