Type: ROUTINE INSPECTION
Date: 18-MAR-2015

3.126(b)

FACILITIES, INDOOR.

The animal room has a strong ammonia smell. Adequate ventilation is required to keep odors to a minimum. Strong smells such as ammonia can cause stress and be a health hazard for the animals.

Odors can be minimized by removing the source - cleaning more often and removing the dirty bedding from the room - and/or moving more air by employing exhaust fans and air purifiers. Soiled bedding is being stored in the animal room and is likely a significant contributor to the problem.

Correct within two weeks, by 4/3/2015.

The inspection and exit briefing were conducted with a facility representative.
