Type: ROUTINE INSPECTION
Date: 26-MAY-2022

2.131(b)(1) Critical

Handling of animals.

An accident during the handling of a male capybara resulted with a fracture of the animal's leg. The capybara was given a sedative through training for veterinary examination while inside its enclosure. As per facility staff, shortly after the injection, the animal reacted by running towards the staff and jumped into the empty exhibit pool before anyone could capture it. Veterinary staff were present and provided immediate treatment to the animal. Handling of animals shall be done as carefully as possible in a manner that does not cause physical harm.

Note: The facility has taken corrective action and has not have any further incidents.

3.131(d)

Sanitation.

The facility noted four instances of nuisance raccoons inside the capybara enclosure within a three week timespan. During this time, the facility was solely providing for pest control provisions on an in-house-basis. The male capybara sustained injuries from interactions with the raccoons that required veterinary consultation. Nuisance raccoons can carry diseases and injure animals. Assure effective provisions to control the nuisance raccoons are in place.

Inspection Report

Note: Since these instances, the facility has contracted with a pest control company and they have not had issues with nuisance raccoons.

The inspection was conducted with the Conservation Education Curator. The exit interview was conducted with the General Curator, Deputy Zoo Director, Executive Zoo Director, Zoo Managers and Conservation Education Curator.
