LAURA LAPORTE

Type: ROUTINE INSPECTION

Date: 03-APR-2014

### 3.75(a)

#### HOUSING FACILITIES, GENERAL.

In the marmoset enclosure there are three areas in need of repair.

\*A metal spring that was used to close the entry door has rusted and broken away from the support. This spring needs to be replaced or eliminated for the animals protection.

\*There is a small patch on the wire mesh on the south side of the enclosure. The patch was done so that the wires are fastened on the inside and sharp points protrude in towards the animals. This needs to be repaired or replaced.

\*At the bottom of the enclosure there is a wood climbing structure that is fastened to metal supports. A long screw is sticking out more that two inches. This needs to be made flush or removed to protect the animals from possible injury.

Housing facilities for nonhuman primates must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

Correct by 04-07-14

### 3.78(d)

#### OUTDOOR HOUSING FACILITIES.

The facility has acquired two marmosets but does not have a continuous perimeter fence that is six feet in height. A perimeter fence that is six feet in height is required for nonhuman primates.

Correct by: 04-30-14.

### 3.78(e)

#### OUTDOOR HOUSING FACILITIES.

The enclosure for the two marmosets does not have a public barrier. Fixed public exhibits housing nonhuman primates, such as zoos, must have a barrier between the primary enclosure and the public at any time the public is present, in order to restrict physical contact between the public and the nonhuman primates.
