SOCIETY

Type: ROUTINE INSPECTION

Date: 21-MAY-2024

3.125(a) Critical

Facilities, general.

On December 5 2023, a 1 month old female tiger cub, "Mina" was noted to be "off today with decreased nursing and activity level." and limping on the left front limb. An x-ray confirmed that both bones were broken in the left forearm. The facility stated that they reviewed the video monitoring from that day and they believe that the fracture occurred when the dam stepped on the side of the nest, it rocked up, and then came back down hard when the dam jumped inside. The dam immediately looked in the direction of the injured cub and went over to her.

The ability of the dam to move the nest box allowed for the injury to the cub.

The facility must be constructed of such material and of such strength as appropriate for the animals involved and to protect the animal from injury.

Corrected prior to inspection on May 21 2024

This inspection and exit interview were conducted with a Facility representative.

Additional Inspectors:

Mary Ann Archer, VETERINARY MEDICAL OFFICER

Prepared By: DAVID MERSEREAU

USDA, APHIS, Animal Care
