MONROE COUNTY CONSERVATION

Type: ROUTINE INSPECTION

Date: 28-APR-2016

3.131(c)

SANITATION.

Within the enclosure containing six elk and five deer there are metal and wood fence posts, as well as, a long section of woven wire lying in a pile on the ground. These materials had come from a fence building project in the animal enclosure. The animals could become entangled in the discarded woven wire resulting in injury. The unused fence posts can also increase the injury risk to the animals as they move around them.

Premises shall be kept clean and in good repair in order to protect the animals from injury and facilitate husbandry practices. Trash and unused materials shall be placed in appropriate areas and cleared from the animal areas to protect the health of the animals. The facility must store the unused fence posts and woven wire in an appropriate area away from the animals in order to eliminate the risk of injury and to promote the health and well-being of the animals. The licensee must ensure that the animal enclosure remains free of unused materials and trash at all times.

Correction date: May 05, 2016

Exit interview conducted with Kelly Maxwell, ACI and the facility representative.
