HENRY SOMMERS

Type: ROUTINE INSPECTION
Date: 22-OCT-2015

2.40(a)(1) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The program of veterinary care did not provide all of the vaccinations given to the puppies, what medications to use for external or intestinal parasites, the frequency that the attending veterinarian is going to do regularly scheduled visits, or the date of the last visit to the facility. The licensee stated that the vet visited last fall. The last documentation for veterinary care that was presented at the inspection was September 6, 2014.

An incomplete program of veterinary care and lack of regularly scheduled visits does not allow for adequate veterinary care. The licensee must have formal arrangements with a veterinarian to include a complete program of veterinary care and regularly scheduled visits.

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*Female Yorkshire Terrier number 74 had visible heavy buildup of brown material on the top and bottom cheek teeth on both sides. The jaw appeared to not be in alignment, the tongue protruded from the right side of the mouth, the hair around the entire mouth was wet, and she continually licked.

*Male Yorkshire Terrier number 168 pulled away and acted sensitive to his mouth being touched. The top and bottom cheek teeth on both sides, and the top incisors had a visible heavy buildup of brown material. The tongue protruded from the right side of the mouth, the hair around the entire mouth was wet, and he continually licked.

*Female Yorkshire Terrier number 009 had visible heavy buildup of brown material on the top and bottom cheek teeth on both sides. The jaw appeared to not be in alignment, the tongue protruded from the right side of the mouth, the hair around the entire mouth was wet, and she continually licked. There were missing teeth, when asked about when the teeth were removed, the licensee state that he has never had any teeth removed.

*Female Yorkshire Terrier number 84 had visible heavy buildup of brown material on the top and bottom cheek teeth on both sides. The jaw appeared to not be in alignment, the tongue protruded from the right side of the

mouth, the hair around the entire mouth was wet, and she continually licked.

*Female Boston Terrier number 175 had white opaque discoloration in the left and right eye. There was a mucus accumulating below both eyes. The licensee believes that was a dog previously examined by a veterinarian, but did not have any records indicating that specific dog being evaluated.

Dental disease can cause damage to the gum tissue, and tooth and mouth structures, be painful, and impact the ability of the dog to eat normally, affecting the overall health of the animal. The licensee must provide adequate veterinary care to prevent, control, diagnose, and treat diseases and injuries.

2.75(a)(2)

RECORDS: DEALERS AND EXHIBITORS.

*The records for the adult dogs on hand on the APHIS 7005 forms were incomplete. Every adult dog was accounted for but was missing varying degrees of information; such as acquisition date, to every required item other than the identification number.

*The records of puppies were not on APHIS 7005 or cage cards.

The required forms allow for fully and correctly disclosing necessary information for trace backs, and information verification for animal acquisitions, sales, removal, deaths, and euthanasia. The licensee must use the APHIS 7005 forms and make, keep, and maintain the information required by paragraph (a) (1) of this section, for ALL live animals, owned, held, or otherwise in his or her control. The records are to include any offspring born of any animal while in his or her possession.

TO BE CORRECTED BY: NOVEMBER 22, 2015

3.8 REPEAT

EXERCISE FOR DOGS.

The licensee did not have a completed exercise plan available and stated that he did not have one. Not having a plan to provide the dogs with appropriate exercise may cause health issues. The licensee must develop, document, and follow an appropriate plan to provide dogs with the opportunity for exercise. In addition, the plan just be

approved by the attending veterinarian. The plan must include written standard procedure to be followed in providing the opportunity for exercise.

3.11(b)(2) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

All forty two enclosures housing forty six dogs and twenty seven puppies had varying degrees of visible brown greasy residue on the inside shelter walls, both sides of the egress doors, and on the solid wall surfaces in the outside area of the enclosures. The licensee stated that he rinses down inside with a hose daily and sanitizes about once a month. The licensee was not sure when the outside portions of the enclosures were last sanitized.

The accumulation of dirt, debris, food waste, and excreta can cause disease and attract pests. The licensee must sanitize used primary enclosures and food receptacles at least once every 2 weeks using one of the methods prescribed in paragraph (b)(3) of this section, or more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta, and other disease hazards.

TO BE CORRECTED BY: NOVEMBER 5, 2015

The inspection and exit interview were conducted with the licensee.
